Preparation

FC-6S

FC-6S-C

The FC-6 family of cleaving tools make high quality fibre preparation simple. Load the fibre, close the cleaver, slide the blade forward and the cleave is done.

FC-7S

Shaped to fit into your hand, the FC-7 single action cleaver has a built in off-cut collector. The FC-7 is available in single fibre "S" or ribbon fibre "M" versions.

Model	Application	Collector included	Option	Consumables
-------	-------------	--------------------	--------	-------------

FC-6S	Single Fibre	No	CU-FC6 off-cut collector	FCP-20BL blade
FC-6SC	Single Fibre	Yes	None	FCP-20BL blade
FC-6M	Ribbon fibre, 12 fibre maximum	No	CU-FC6 off-cut collector	FCP-20BL blade
FC-6M-C	Ribbon fibre, 12 fibre maximum	Yes	None	FCP-20BL blade & TR-FC7 off-cut collector
FC-7S	Single fibre	Yes	None	FCP-20BL blade & TR-FC7 off-cut collector
FC-7M-F	Ribbon fibre, 4 fibre maximum	Yes	AP-FC7 single fibre adaptor	FCP-20BL blade & TR-FC7 off-cut collector

JR-25

The JR-25 single fibre-stripping tool can be used to remove from 250um primary coated fibres, or to remove both the primary and secondary coating from 900um tight buffered fibres. The JR-25 improves on its predecessor, the JR-22, by having larger fibre guides, a clearly visible measurement scale and a revised blade design

JR-5B

The JR-5B is a lightweight heated stripping tool that may be powered by an internal battery or from an external DC supply. A JR-5B-F kit includes a battery, charger, DC input adapter and AC/DC converter; all you need to start stripping fibre ribbons in Sumitomo fibre holders. The JR-5B complies with the ROHS directive 2002/95/EC.

FTA-2

The FTA-2 is used for ribbonising single fibres over a short length to allowing multiple single fibres to be spliced simultaneously on a ribbon splicer.

Brochures for fibre preparation products are available as .pdf file downloads.
